DECLASSIFICATION REVIEW by NIMA/DOD 4/7/00

WTS 8198-64
16 September 1964

COPY 7

MEMORANDUM FOR: Chief, Military Economic Division, OMR/CIA

ATTENTION: [REDACTED] 25X1A

THROUGH: Chief, Reconnaissance Group
DD/I Collection Guidance

SUBJECT: Submarine Identifications on YANFOL Imagery

REFERENCES: A. C-RR4-81,746 (Join Project WPIC NO. 1)
B. C-RR4-81,746 (Supplement 1) (Join Project WPIC NO. N-826/64)

1. In response to requirement No. C-RR4-81,746 and supplement (WPIC Project No. N-826/64) as amended, enclosure is forwarded herewith.

2. Discussions held subsequent to initiation of the project and need a need to establish whether or not the BK original positive materials utilized during the OAK at WPIC and distributed to other agencies. A significantly improved by further utilization of the original materials. A detailed investigation into this matter was conducted as follows:

25X1D

A. Contact dup positives and 20x film enlargements were obtained from the original negative on all cloud-free [REDACTED] coverages of Severodvinsk and Litsa Cuba.

B. Highest quality reproductions with exposure controlled for greatest detail on submarines in the water were specified.

C. The materials thus obtained were carefully compared with original dup positives (materials utilized during the OAK) for any significant change in the submarine imagery.

3. Improvement in photographic detail of submarine imagery was detectable when compared with original [REDACTED] positive materials.

PRE-RELEASE OF PROJECT N-826/64

1. Identification of submarines by class on KEYHOLE photography is inherently difficult and is dependent upon several interlocking factors pertaining, in large part, to the mechanics of the camera systems utilized, the light and atmospheric environment, and the nature of the specific imagery involved.

25X1B

B. KEYHOLE photography of locations above 60°N is of marginal quality at best during all but the summer months due to the low sun angle at those latitudes.

C. KH-4 imagery has been optimized to a point where, under ideal conditions, it is feasible to recognize certain submarine characteristics - and to establish measurement criteria.

25X1D

2. The NPIC Photo Analysis Group is charged with the responsibility for immediate read-outs and back-up reports pertaining to the status of Soviet naval facilities and naval order of battle as imaged on overhead photography. NPIC is not charged with a requirement to provide detailed characteristics of a technical nature on Soviet naval vessels.

A. Size and characteristics information utilized by NPIC has been dependent upon values published by ONI/NRTSC.

B. ONI/NRTSC figures on submarine lengths by class have changed significantly in the period 1963 - 1964. The following table reflects these changes:

S-14508

TOP SECRET

TCS 8198-64

ONI/NRTSC FIGURES BY YEAR

25X1D

25X1D

<u>CLASS</u>	<u>1963</u>	<u>1964</u>
E-I	385	370
E-II	385	370
H	365	365
H-II	-	-
N	330	-
N-II	-	-

It will be noted that whereas previously submarine classes could be readily differentiated by class on the basis of dimensional evidence, the number of classes now carried in the [REDACTED] range make such identification by class extremely hazardous in the absence of additional information. It should be further noted that visible hull imagery of Soviet "H" Class SSBN's has never exceeded 350 ft [REDACTED] Only when utilizing optimum viewing and processing conditions has it been possible to include the shadow cast by the stern as a part of the length over-all (approximately 365 ft) of this vessel.

25X1D

25X1D

3. The metrical analysis approach to the identification of submarine imagery on KEYHOLE photography is complicated by the problem of determining the end-points on submarine hulls. Regardless of how good either scaling data or orbital data is, it is often most difficult to arrive at a consensus among PI's as to a determination of precise end-points on submarine hull imagery. Seldom are there finite submarine end-points visible on KH-4 due primarily to the low contrast factor between a dark-hulled submarine and the surrounding water. In addition the high atmospheric moisture content usually prevalent along coastal areas tends to further degrade both the contrast level and the resolution of the photography. The resolution capability of the camera system is probably among the less notable limiting factors inherent to submarine classification. On KH-4 photography, under optimum conditions, it is considered that the accuracy of metrical analysis upon submarine imagery is plus or minus 10 feet for length over-all values.

1. Probable E SS on cradle
2. U/I SS
3. E SSCN
4. U/I SS
5. U/I SS
6. U/I SS

Remarks

1240' known.

Min does not include white object. Max includes white object.

Very poor imagery. Very poor end points.

Athwartship lines similar to SSC configuration pointed bow and stern. Flat deck.

Very marginal imagery.

Poor end-points.

Max value - very soft imagery.

Item Number

Remarks

Covered building way

1. U/I SS in basin
2. U/I SS
3. U/I SS in drydock
4. SS along pier by drydock
5. Possible U/I SS
6. 2 possible GM
7. SS by port facility

Rectangular deck inter-
ruptions appear to equate
to SSG configurations.
Very poor imagery.
No break in vessel noted.
White object appears sus-
pended over end of sub-
marine.
Stern very indistinct.
Imagery too soft to be
measured monoscopically.
Poor imagery on end points
- length over-all is of
discernable length only
segmented appearance
suggests SSG configuration.

12. U/I SS
- 13-16. 4 possible SS

A U/I object on cradle

Remarks

1240' known.

Stern apparently partially obscured. Sail appears large. Marginal imagery. Athwartship lines interrupting hull indicate possible SSC configuration. Marginal imagery. Max based on shadow. Min less white blob. No break in vessel noted. Small sloping sail. Bulbous bow. No characteristics identifiable. No characteristics identifiable. Max includes all segments. Firm imagery - well defined sail. Very poor imagery - barely detectable. Only second sub outboard from quay is measurable - imagery of remaining 3 subs is very indistinct.

<u>Item Number</u>	<u>North</u>	<u>Remarks</u>
1.	Skoryy DD	Good imagery, firm end points.
2.	E SSGN	Short sail shadow pointed ends -
3.	E SSGN	indentation along hull equating
		to missile compartments.
4.	Bolva APL	Topside flat. Typical imagery
5.	Bolva APL	for this class.
6.	E SSGN	Possible segmentation in deck -
		probable small sail.
	<u>South</u>	
1.	N SSN	Bulbous nose, tapered stern.
2.	N SSN	Bulbous nose, tapered stern.
3.	Possible E SSGN	Pointed bow, flat deck, deck
		unlike adjacent "H" Classes.
4.	H SSBN	Large sails. Little taper
5.	H SSBN	to bow.
6.	N SSN	Bulbous nose. Tapered stern,
7.	N SSN	pronounced parallelism to
8.	N SSN	hull shapes.
9.	Bolva APL	Typical imagery.
10.	U/I SS	Forward end-point not well
		defined.
11.	Bolva APL	Typical imagery.
12.	Don AS	Typical imagery (superstructure
		detail similar).
